

This application server upgrade will install a Java Plug-In (JPI) that will be replacing Jinitator.

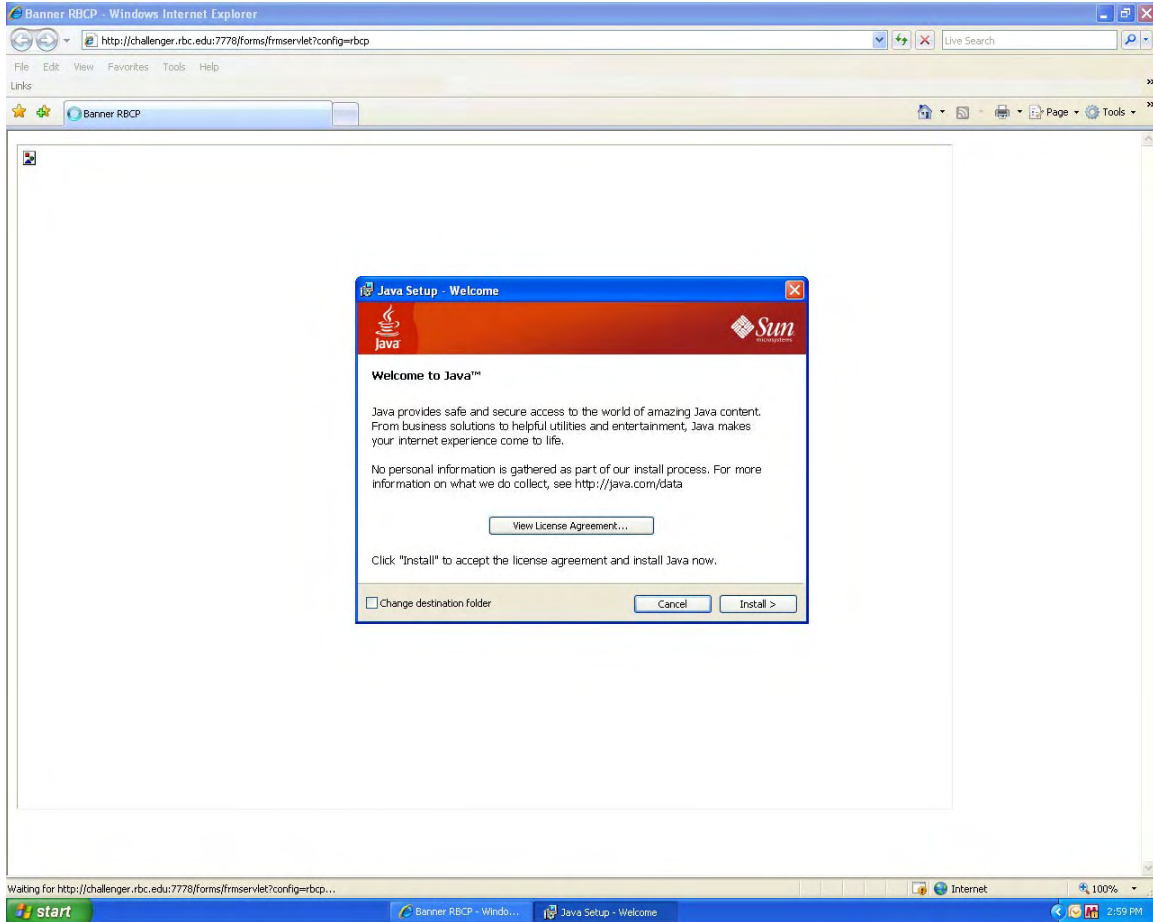

1. The first time you use Banner **your PC should ask you to install the new Java application.** Click on the yellow bar at the top of the window and select install.

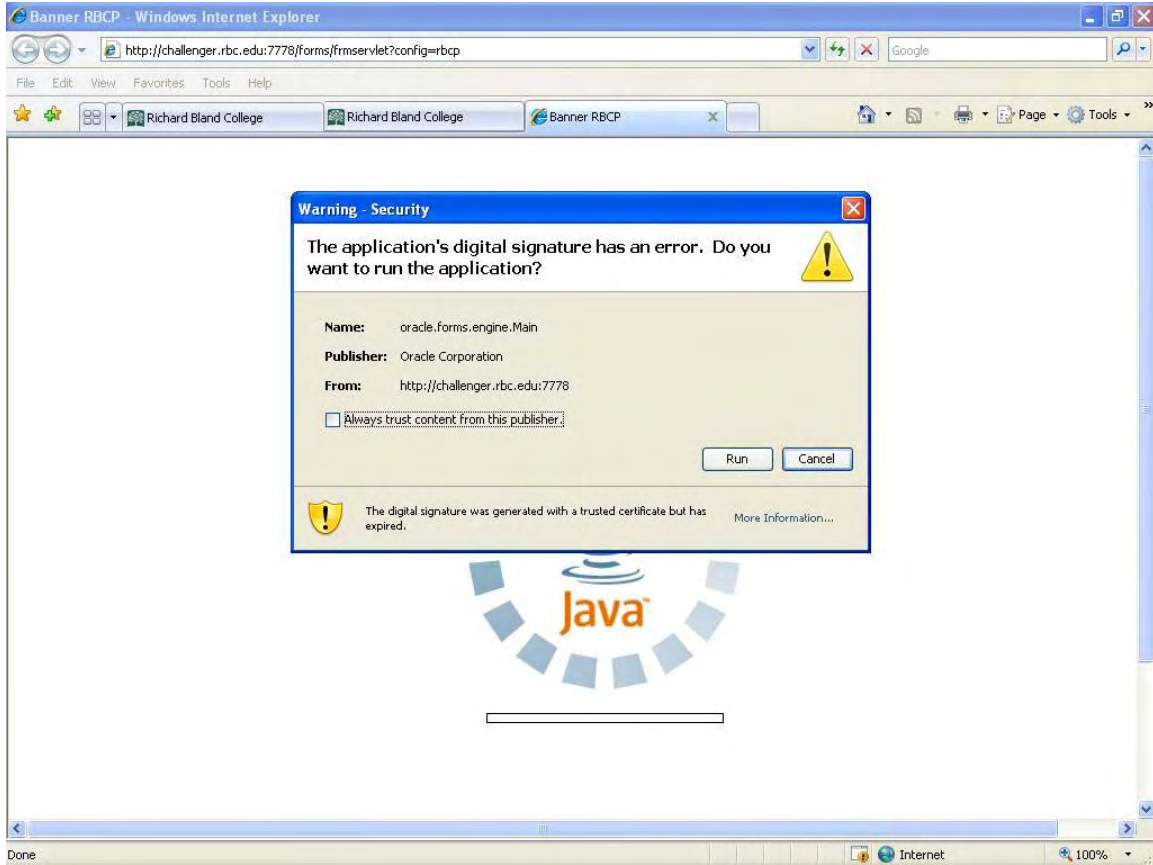

2. When the message box asking “Do you want to install the software?” appears, click the “Install” button.

3. If a “Welcome to Java” window appears, click the “Install >” button.

4. If a window opens indicating the application's digital signature has an error, click the "Run" button.

6. The system will display the Banner Login page. Log in using your username and password for the appropriate database (RBCP, BTEST, TRNG).
